OUR ENVIRONMENTAL COMMITMENT

We are a leading independent oil and gas exploration and production company in Latin America. Since our creation, we have aimed for the highest standards in five areas that make up our SPEED Integrated Value System and that form the basis of our Sustainability management: Safety, Prosperity, Employees, Environment and Community Development.

Thanks to this, our environmental management is more than just regulatory compliance and is connected to our core and to the spirit of permanence and good neighborliness in the territories we operate in.

Our controls

Our **“Nature, People and Neighbors”** corporate commitment expresses and integrates the spirit and responsibility of valuing the world and always working to preserve and protect nature, its beauty and the ways of life it encompasses. Therefore, we constantly focus on finding and researching new processes, technologies and operating methods that contribute to the protection of our environment and give back to nature.

We develop strategies and implement best practices focused on preventing, controlling and mitigating the environmental impacts associated with our activities; we integrate continuous improvement, and we are committed to preserving the environment and complying with current environmental legislation and other requirements aimed at the efficient use of natural resources.

Our principles

Our mission to provide energy to the world is noble and necessary and contributes to sustainable development. Therefore, we have proposed to carry out our operational activities under the following environmental principles:

- We share global concern about climate change and the importance of contributing to its mitigation. Our challenge is to achieve a low Greenhouse Gas (GHG) emissions operation and, in the long term, achieve carbon neutrality in Scopes 1 and 2.
- We understand the need for efforts to guarantee coordinated planning and management and conserve and protect the biodiversity of our planet.
- We make every effort to protect water and use it sustainably, acknowledging it as a vital resource.
- We recognize the relevance of incorporating the concept of Circular Economy in our processes to reduce inputs, increase the useful life of materials and minimize waste generation.
- We educate, train and raise awareness of our employees, contractors and neighboring communities in environmental matters.
- We prepare and train to face contingencies and act fast to mitigate their consequent impacts.

We believe in the importance of protecting and strengthening our neighbors and nature to ensure the successful and sustainable future of the Company. We therefore assume these principles and prioritize the respect and fulfillment of our Environmental Commitment.

Marcela Vaca Torres
General Director
